

# FAJAR SIGNALS SDN BHD

## FS VHF UHF RADIO FOR CRANES

The Crane Radio System is designed with handsfree features that meets the requirements of Crane Operators. The VHF and UHF radio model and brand is selectable, and will be fitted to a Stainless Steel Enclosure which can be mounted above the operators left side.

The operator can select the Radio and communicate using the industrial gooseneck microphone by pressing the industrial foot switch. Additional indoor speakers are provided to enhance incoming radio signals. Outdoor antennas are marine type to meet the harsh environment.

In addition, industrial headsets are available and can be fitted with the gooseneck microphone Box. Communication with the deck floor can be carried out by loudhailer function via an outdoor boom speaker.

All relevant cables are supplied with the System with industrial plugs and sockets to the enclosure. The System is simple and easy and it's plug and play features can be installed with little supervision. The full System is suitable for Safe area applications

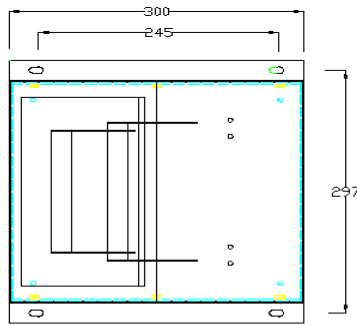

Every effort is taken to ensure the quality of the items and system to meet the harsh environment and usage in the ever demanding Offshore Platform and Marine Crane application.
