FS TELEPHONE ACOUSTIC HOOD

The GR3P Acoustic Hood has been designed to facilitate communication in environments where the ambient noise level is not critical such as in Petro-Chemicals, Power Plants and non process areas which still need a covering for the communication devices.

The GR3P Acoustic Hood is made of Glass Reinforced Fiber material which forms the outer shell of the whole unit. Glass Reinforced Fiber is renowned for its strength and durability in harsh and rough environments and it requires no routine maintenance.

The interior wall is lined with noise absorbing black PU Foam
This material is heat resistant and soft. It helps to absorb ambient sound up to 7dB. The material is strong and can be easily wiped clean during maintenance

The mounting is supported by SS316 bracket & fasteners which can support weight up to 15Kg. The design is such that the weight is not supported by the hood but by the mounting bracket. The construction enables GR3P to meet the industry requirement for a robust and cost effective solution in low noise areas.

ACOUSTIC HOOD SPECIFICATION

- Sound Reduction Upto 7dB across the wall
- Suitable for Outdoor and medium noisy environment
- Heat Resistant PU foam internal lining
- Stainless Steel hardware fitting. Mounting Brackets with bolts.
- Colour standard Canary Yellow (Other colours available)
- Telephone Ring Detector with Junction Box (Option)
- Beacon and Ringger fitted (Option)
- SS316 Mounting Plate (Option)
- For Pole supply with special design available (Upon request)

General Specification

Body Material : Glass Reinforced Fiber

Internal Lining: PU Heat resistant Foam

Wall Mounting Bracket: SS316

Mounting Plate: Glass Fiber Board, SS. Plate with cost added

Colour : Yellow, Red, Blue, Grey, (Other Colours Please Specify)

Model No	
GR3P	Glass Reinforced Fiber with PU foam Lining
Others	Additional of beacon/sounder with phone please request for via email
