## FS WIND SOCK

The WS-15 wind sock has been design for conditions where the environment is harsh and has a high requirement for corrosion resistant. The bearing inside the chamber is made from Stainless Steel material to withstand Corrosion. All other parts are mild Steel welded together and is further made strong by hot dip galvanizing. This has a high durability and is suitable for harsh requirement for offshore O&G industry. The Sock material is made of high resistant weatherproof nylon. The colour is fluorescent orange which will be visible in rough and harsh weather.

The whole assembly is pole mounted. The mounting is made easy for installation by having 2 x hex head screws on the chamber to work as jam nuts to secure the chamber to the pole.

The unit is ready for installation once the items are received at site. It only requires a pole already installed at site and the wind sock assembly can be slipped through the pole and secured at the correct height with ease.

No further maintenance is required, as the material utilised is suitable for outdoor enviornment.
